### Continuous Internal Evaluation (CIE):

#### Theory for 50 Marks

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of three quizzes are conducted along with tests. Test portion is evaluated for 50 marks and quiz is evaluated for 10 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three (conduct additional quizzes and take best three). The three tests are conducted for 50 marks each and the average of all the tests are calculated for 50. The marks for the assignments are 20 (2 assignments for 10 marks each). The marks obtained in test, quiz and assignment are added to get marks out of 100 and report CIE for 50 marks.

#### Laboratory- 50 Marks

The laboratory session is held every week as per the time table and the performance of the student is evaluated in every session. The average of the marks over number of weeks is considered for 30 marks. At the end of the semester a test is conducted for 10 marks. The students are encouraged to implement additional innovative experiments in the lab and are awarded 10 marks. Total marks for the laboratory is 50.

### Semester End Examination (SEE):

**Total marks: 50+50=100**

**SEE** for 50 marks are executed by means of an examination.

The Question paper for each course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the entire syllabus. Part – B Students have to answer five questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have a maximum of three sub divisions. Each unit will have internal choice in which

both questions cover entire unit having same complexity in terms of COs and Bloom's taxonomy level.

| <b>Course Learning Objectives: The students will be able to</b> |   |                            |
| 1   | Identify standard algorithms used to provide confidentiality, integrity and authenticity for data |                            |
| 2   | Distinguish key distribution and management schemes.  |                            |
| 3   | Deploy encryption techniques to secure data in transit across data networks                       |                            |
| 4   | Implement security applications in the field of Information technology                            |                            |
| 5   | Demonstrate data privacy  |                            |

| <b>UNIT-I</b>  |              |
|--|--------------|
| Symmetric Cipher Model, Cryptography, Cryptanalysis and Brute-Force Attack, Substitution Techniques, Caesar Cipher, Mono-alphabetic Cipher, Playfair Cipher, Hill Cipher, Poly alphabetic Cipher, One Time Pad. Block Ciphers and the data encryption standard: Traditional block Cipher structure, stream Ciphers and block Ciphers, Motivation for the feistel Cipher structure, the feistel Cipher, The data encryption standard, DES encryption, DES decryption, A DES example, results, the avalanche effect, the strength of DES, the use of 56-Bit Keys, the nature of the DES algorithm, timing attacks, Block cipher design principles, number of rounds, design of function F, key schedule algorithm. | <b>8 Hrs</b> |

| <b>UNIT-II</b>   |              |
|--|--------------|
| Principles of public-key cryptosystems. Public-key cryptosystems. Applications for public-key cryptosystems, requirements for public-key cryptosystems. Public-key cryptanalysis. The RSA algorithm, description of the algorithm, computational aspects, the security of RSA. Other Public-Key Cryptosystems: Diffiehellman key exchange, The algorithm, key exchange protocols, man in the middle attack, Elgamal Cryptographic systems, Elliptic curve arithmetic, abelian groups, elliptic curves over real numbers, elliptic curves over $Z_p$ , elliptic curves over $GF(2^m)$ , Elliptic curve cryptography, Analog of Diffie-hellman key exchange, Elliptic curve encryption/ decryption, security of Elliptic curve cryptography, Pseudorandom number generation based on a asymmetric cipher | <b>8 Hrs</b> |
| <b>UNIT-III</b>  |              |
| Symmetric key distribution using Symmetric encryption, A key distribution scenario, Hierarchical key control, session key lifetime, a transparent key control scheme, Decentralized key control, controlling key usage, Symmetric key distribution using asymmetric encryption, simple secret key distribution, secret key distribution with confidentiality and authentication, A hybrid scheme, distribution of public keys, public announcement of public keys, publicly available directory, public key authority, public keys certificates, X509 certificates. Certificates, X-509 version 3, Public Key infrastructure   | <b>8 Hrs</b> |
| <b>UNIT-IV</b>   |              |
| Privacy-Preserving Data Mining Algorithms, The Randomization Method, Group Based Anonymization.  | <b>8 Hrs</b> |
| <b>UNIT-V</b>  |              |
| Distributed Privacy-Preserving Data Mining, Privacy-Preservation of Application Results, Limitations of Privacy: The Curse of Dimensionality, Applications of Privacy-Preserving Data Mining   | <b>8 Hrs</b> |

| <b>Course Outcomes: After completing the course, the students will be able to</b> |   |
|---|---|
| CO1   | Identify the vulnerabilities in any computing system and hence to choose security solution. |
| CO2   | . Plan to resolve the identified security issues.   |
| CO3   | Analyse security mechanisms using theoretical approache                                     |
| CO4   | Recognize the importance of data privacy, limitations and applications                      |
| CO5   | Organize the privacy preserving algorithms  |

**Continuous Internal Evaluation (CIE):**

**Theory for 50 Marks**

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of three quizzes are conducted along with tests. Test portion is evaluated for 50 marks and quiz is evaluated for 10 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three (conduct additional quizzes and take best three). The three tests are conducted for 50 marks each and the average of all the tests are calculated for 50. The marks for the assignments are 20 (2 assignments for 10 marks each). The marks obtained in test, quiz and assignment are added to get marks out of 100 and report CIE for 50 marks.

**Semester End Examination (SEE):**

**Total marks: 50+50=100**

**SEE** for 50 marks is executed by means of an examination. The Question paper for each course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the entire syllabus. Part – B Students have to answer five questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have a maximum of three sub divisions. Each unit will have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom’s taxonomy level.

| <b>Credits: L:T:P:S: 3:0:0</b>                                  | <b>SEE Marks: 100</b>   |
| <b>Hours: 40L+26T</b>   | <b>SEE Duration: 3 Hrs</b>  |
| <b>Course Learning Objectives: The students will be able to</b> |   |
| 1   | Learn fundamental features of object-oriented language  |
| 2   | Design, write, debug, run Python Programs   |
| 3   | Develop console -based applications using Python  |
| 4   | Develop console & windows applications using Python   |
| 5   | Introduce event driven Graphical User Interface (GUI) programming using Python built in functions |

| <b>UNIT-I</b>   |              |
|---|--------------|
| Why should you learn to write programs, Introduction to Python, Variables, expressions and statements, Conditional execution, Functions.<br>Application: In learning and implementing small project process | <b>8 Hrs</b> |
| <b>UNIT-II</b>  |              |

|  |              |
|--|--------------|
| Iteration, Strings, Files.Application: Pattern recognition and Reading resultant column in supervised learning data set                        | <b>8 Hrs</b> |
| <b>UNIT-III</b>  |              |
| Lists, Dictionaries, Tuples, Regular Expressions.Application: Handling query languages and Managing Large set of data with respect to database | <b>8 Hrs</b> |
| <b>UNIT-IV</b>   |              |
| Classes and objects, Classes and functions, Classes and methods.Application: Designing games and puzzles                                       | <b>8 Hrs</b> |
| <b>UNIT-V</b>  |              |
| Networked programs, Using Web Services, Using databases and SQL.Application: Music composition and movie development                           | <b>8 Hrs</b> |

|   |  |
|---|--|
| <b>Course Outcomes: After completing the course, the students will be able to</b> |  |
| CO1   | Understand Python syntax and semantics and be fluent in the use of Python flow control and functions.      |
| CO2   | Demonstrate proficiency in handling Strings and File Systems.  |
| CO3   | Implement Python Programs using core data structures like Lists, Dictionaries and use Regular Expressions. |
| CO4   | Interpret the concepts of Object-Oriented Programming as used in Python.                                   |
| CO5   | Implement exemplary applications related to Network Programming, Web Services and Databases in Python.     |

### Continuous Internal Evaluation (CIE):

#### Theory for 50 Marks

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of three quizzes are conducted along with tests. Test portion is evaluated for 50 marks and quiz is evaluated for 10 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three (conduct additional quizzes and take best three). The three tests are conducted for 50 marks each and the average of all the tests are calculated for 50. The marks

for the assignments are 20 (2 assignments for 10 marks each). The marks obtained in test, quiz and assignment are added to get marks out of 100 and report CIE for 50 marks.

**Semester End Examination (SEE):**

**Total marks: 50+50=100**

**SEE** for 50 marks is executed by means of an examination. The Question paper for each course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the entire syllabus. Part – B Students have to answer five questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have a maximum of three sub divisions. Each unit will have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom’s taxonomy level.

| PROJECT PHASE I   |  |                     |
| Course Code: MVJ21CDPR76  |  | CIE Marks:100       |
| Credits: L:T:P:S:0:0:4  |  | SEE Marks: 100      |
| Hours:  |  | SEE Duration: 3 Hrs |
| <p><b>Course objective :</b></p> <p>To support independent learning and innovative attitude.</p> <p>To guide to select and utilize adequate information from varied resources upholding ethics.</p> <p>To guide to organize the work in the appropriate manner and present information (acknowledging the sources) clearly.</p> <p>To develop interactive, communication, organisation, time management, and presentation skills.</p> <p>To impart flexibility and adaptability.</p> <p>To inspire independent and team working.</p> <p>To expand intellectual capacity, credibility, judgement, intuition.</p> <p>To adhere to punctuality, setting and meeting deadlines.</p> <p>To instil responsibilities to oneself and others.</p> <p>To train students to present the topic of project work in a seminar without any fear, face audience</p> |  |                     |

confidently, enhance communication skill, involve in group discussion to present and exchange ideas

Project Work Phase - II: Each student of the project batch shall involve in carrying out the project work jointly in constant consultation with internal guide, co-guide, and external guide and prepare the project report as per the norms avoiding plagiarism..

**Course outcomes:**

Present the project and be able to defend it.

Make links across different areas of knowledge and to generate, develop and evaluate ideas and information so as to apply these skills to the project task.

Habituated to critical thinking and use problem solving skills.

Communicate effectively and to present ideas clearly and coherently in both the written and oral forms.

Work in a team to achieve common goal.

Learn on their own, reflect on their learning and take appropriate actions to improve it

**CIE procedure for Mini - Project:**

CIE procedure for Project Work Phase - 1:

(i) Single discipline: The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and two senior faculty members of the Department, one of whom shall be the Guide.

The CIE marks awarded for the project work phase -1, shall be based on the evaluation of project work phase -1 Report, project presentation skill and question and answer session in the ratio 50:25:25. The marks awarded for the project report shall be the same for all the batch

mates.

(ii) Interdisciplinary: Continuous Internal Evaluation shall be group wise at the college level with the participation of all guides of the college. Participation of external guide/s, if any, is desirable.

The CIE marks awarded for the project work phase -1, shall be based on the evaluation of project work phase -1 Report, project presentation skill and question and answer session in the ratio 50:25:25. The marks awarded for the project report shall be the same for all the batch mates

| <b>Course Learning Objectives: The students will be able to</b> |   |                            |
| 1   | Recognize and Describe the four types of NoSQL Databases, the Document-oriented, KeyValue   |                            |
| 2   | Pairs, Column-oriented and Graph databases useful for diverse applications.   |                            |
| 3   | Apply performance tuning on Column-oriented NoSQL databases and Document-oriented NoSQL Databases.  |                            |
| 4   | Differentiate the detailed architecture of column oriented NoSQL database, Document database and Graph Database and relate usage of processor, memory, storage and file system commands |                            |
| 5   | Evaluate several applications for location based service and recommendation services. Devise an application using the components of NoSQL.  |                            |

| <b>UNIT-I</b>  |              |
|--|--------------|
| Why NoSQL? The Value of Relational Databases, Getting at Persistent Data, Concurrency, Integration, A (Mostly) Standard Model, Impedance Mismatch, Application and Integration Databases, Attack of the Clusters, The Emergence of NoSQL, Aggregate Data Models; Aggregates, Example of Relations and Aggregates, Consequences of Aggregate Orientation, Key-Value and Document Data Models, Column-Family Stores, Summarizing AggregateOriented Databases. More Details on Data Models; Relationships, Graph Databases, Schemaless Databases, Materialized Views, Modeling for Data Access, | <b>8 Hrs</b> |
| <b>UNIT-II</b>   |              |
| Distribution Models; Single Server, Sharding, Master-Slave Replication, Peer-to-Peer Replication, Combining Sharding and Replication. Consistency, Update  | <b>8 Hrs</b> |

|  |              |
|--|--------------|
| Consistency, Read Consistency, Relaxing Consistency, The CAP Theorem, Relaxing Durability, Quorums. Version Stamps, Business and System Transactions, Version Stamps on Multiple Nodes   |              |
| <b>UNIT-III</b>  |              |
| Map-Reduce, Basic Map-Reduce, Partitioning and Combining, Composing Map-Reduce Calculations, A Two Stage Map-Reduce Example, Incremental Map-Reduce Key-Value Databases, What Is a Key-Value Store, Key-Value Store Features, Consistency, Transactions, Query Features, Structure of Data, Scaling, Suitable Use Cases, Storing Session Information, User Profiles, Preference, Shopping Cart Data, When Not to Use, Relationships among Data, Multioperation Transactions, Query by Data, Operations by Sets | <b>8 Hrs</b> |
| <b>UNIT-IV</b>   |              |
| Document Databases, What Is a Document Database?, Features, Consistency, Transactions, Availability, Query Features, Scaling, Suitable Use Cases, Event Logging, Content Management Systems, Blogging Platforms, Web Analytics or Real-Time Analytics, E- Commerce Applications, When Not to Use, Complex Transactions Spanning Different Operations, Queries against Varying Aggregate Structure  | <b>8 Hrs</b> |
| <b>UNIT-V</b>  |              |
| Graph Databases, What Is a Graph Database?, Features, Consistency, Transactions, Availability, Query Features, Scaling, Suitable Use Cases, Connected Data, Routing, Dispatch, and Location-Based Services, Recommendation Engines, When Not to Use.   | <b>8 Hrs</b> |

| <b>Course Outcomes: After completing the course, the students will be able to</b> |  |
|---|--|
| CO1   | Demonstrate an understanding of the detailed architecture of Column Oriented NoSQL databases, Document databases, Graph databases. |
| CO2   | Use the concepts pertaining to all the types of databases.   |
| CO3   | Analyze the structural Models of NoSQL.  |
| CO4   | Develop various applications using NoSQL databases   |

**Continuous Internal Evaluation (CIE):****Theory for 50 Marks**

CIE is executed by way of quizzes (Q), tests (T) and assignments. A minimum of three quizzes are conducted along with tests. Test portion is evaluated for 50 marks and quiz is evaluated for 10 marks. Faculty may adopt innovative methods for conducting quizzes effectively. The number of quizzes may be more than three (conduct additional quizzes and take best three). The three tests are conducted for 50 marks each and the average of all the tests are calculated for 50. The marks for the assignments are 20 (2 assignments for 10 marks each). The marks obtained in test, quiz and assignment are added to get marks out of 100 and report CIE for 50 marks.

**Semester End Examination (SEE):**

**Total marks: 50+50=100**

**SEE** for 50 marks is executed by means of an examination. The Question paper for each course contains two parts, Part – A and Part – B. Part – A consists of objective type questions for 20 marks covering the entire syllabus. Part – B Students have to answer five questions, one from each unit for 16 marks adding up to 80 marks. Each main question may have a maximum of three sub divisions. Each unit will have internal choice in which both questions cover entire unit having same complexity in terms of COs and Bloom’s taxonomy level.
